GPs in Wales, 2006 - 2016

A profile of the GP workforce in Wales is presented in terms of type of GPs (including GP registrars and locums), age, gender, workforce flows, Welsh language ability and qualifications in charts, tables and maps. Summaries of key figures by GP practices and primary care clusters are also provided in separate spreadsheets.

Note that the quality of GP whole time equivalent figures (WTE) continue to be of concern and are omitted. Headcount figures are unaffected. All data in the release relates to headcount numbers as at 30 September except for 2009 which is at 1 October.

In November 2015 Welsh Government published A Planned Primary Care Workforce for Wales which outlines areas of development and acknowledges current gaps in data and information.

Key results

- The number of GP practitioners in Wales (excluding registrars, retainers and locums) was 2,009 at 30 September 2016, 12 more (0.6 per cent) than the previous year and an increase of 127 (7 per cent) since 2006. There were 6.5 GP practitioners per 10,000 population in 2016.

- There were 684 GP Locums in Wales at 30 September 2016. The number of GP Locums per 100 GPs varied across health boards from 29.5 in Aneurin Bevan to 39.4 in Powys.

- The trend towards a predominantly female General Practice in Wales continues, as elsewhere in the UK. In 2016 female GP practitioners accounted for over half (52.4 per cent) of the GP Practitioner workforce, an increase of 373 (54.9 per cent) since 2006.

- The number of GP practitioners aged 55 or over has remained steady in the last five years, with around 22.2 per cent of the GP practitioner workforce falling into this age band in 2016.

Additional analysis by Local Health Board can be found in the Annex tables on pages 38 to 42 of this release and on StatsWales.

Summary

- The number of GP practitioners in Wales (excluding registrars, retainers and locums) was 2,009 at 30 September 2016, 12 more (0.6 per cent) than the previous year and an increase of 127 (7 per cent) since 2006. There were 6.5 GP practitioners per 10,000 population in 2016.

- There are fewer practices in Wales than a decade ago. In 2016 the number of GP partnerships was 11.1 per cent lower than in 2006. The number of patients per practitioner has fallen by 3.2 per cent since 2006 but patients per partnership have consequently risen.

- There were 684 GP Locums in Wales at 30 September 2016. The number of GP Locums per 100 GPs varied across health boards from 29.5 in Aneurin Bevan to 39.4 in Powys.

- The trend towards a predominantly female General Practice in Wales continues, as elsewhere in the UK. In 2016 female GP practitioners accounted for over half (52.4 per cent) of the GP Practitioner workforce, an increase of 373 (54.9 per cent) since 2006. Females accounted for only 36.1 per cent of the total in 2006.

- The number of GP practitioners aged 55 or over has remained steady in the last five years, with around 22.2 per cent of the GP practitioner workforce falling into this age band in 2016.

- The number of GP retainers has decreased by 42 (68.9 per cent) over the last decade and decreased by 6 (24.0 per cent) over the last 12 months to 19. In 2016 all 19 GP retainers were women.

- Since 2006 the number of GP registrars has increased by 80 (52.6 per cent) to 232 in 2016.

- In 2016, 369 practitioners recorded that they could speak Welsh. Hywel Dda had the largest number of GP with an ability to speak Welsh per 10,000 population at 2.0 whilst Aneurin Bevan had the smallest with 0.6 GPs per 10,000 population in 2016.
GP Practices
(as at 30th September 2016)
GP practitioner trends

Chart 1: Number of GP practitioners at 30 September (a)

(a) Except for 2009 and prior to 2000 which is at 1 October.
(b) Comparisons across years should be treated with caution due to changes in methodology. See definitions in the Notes section.

A GP practitioner includes GP providers and salaried/other GPs. See Notes section for detailed explanation.

The number of GP practitioners in Wales (excluding registrars, retainers and locums) was 2,009 at 30 September 2016, 12 more (0.6 per cent) than the previous year and an increase of 127 (7 per cent) since 2006. The number in 1995 stood at 1,741.

Of the 2,009 GP practitioners, 38 were working in more than one practice in Wales. However these GP practitioners are only counted once in the headcount figure in all of the tables and charts in the release.

Chart 2: Registered patients per GP practitioner / partnership
There were 441 general practices in Wales in 2016, a decrease of 13 Practices (1.7 per cent) on last year. Since 2006 the number of registered patients per GP practitioner has decreased by 52 (3.2 per cent) to 1,592.
Map 2: Registered Patients per GP practitioners (average list size) by Local Health Board 2016

Average List Size by Local Health Board 2016

March 2017

OGL
The number of registered patients per practitioner tends to be greater in the south east with Cwm Taf University having the largest list size of 1,730. Powys had the smallest average list size of 1,330.

The number of partnerships has decreased from 496 in 2006 to 441 in 2016 with a consequent increase in the number of registered patients per partnership from 6,236 in 2006 to 7,251 in 2016, an increase of 1,015 (16.3 per cent) over the last decade.

**Chart 3: Number of partnerships by number of partners**

A partnership is a financial arrangement between two or more bodies of which one must be a GP practitioner.

In 2016 there were 40 single-handed partnerships, a fall of 5 from 2015. Just over two thirds (298 practices) of all partnerships had 5 or fewer partners.
The proportion of single-handed practices is highest in Betsi Cadwaladr University. There were no single handed practices in Powys (refer to Table A2).
In 2016 the numbers of female GP practitioners was higher then the numbers of male GP practitioners. There were 97 more female GPs than male GPs. Since 2006 the number (headcount) of male GP practitioners has decreased by 246 (20 per cent) to 956 whilst the number of female GP practitioners increased by 373 (54.9 per cent) to 1,053.

Since 2006 the largest group of male GP practitioners has been the 45-54 group (33.3 per cent in 2016) although a decade ago this was a proportionately larger group.

The number of male GP practitioners in the 30-44 groups has declined over the last decade but in 2016 this was the same number as the 45-54 group (33.3 per cent).
The largest group among female GP practitioners remains the 30-44 group (53.3 per cent in 2016) which recorded an increase from last year of 35 female GP practitioners to 561.
The Local Health Boards with the highest proportions of female GPs are Powys and Aneurin Bevan University with Hywel Dda University having the lowest proportion (refer to Table A2).
The number of GP practitioners aged 55 and above has increased from 373 in 2006 to 445 in 2016.

The number of GP practitioners aged under 45 has increased from 790 in 2006 to 909 in 2016, a 15.1 per cent increase. Female GPs now make up nearly two thirds (64.7 per cent) of GPs of this age group whereas in 2006, 50.9 per cent of females were aged under 45.

Of the 445 GP practitioners aged 55 or over, 317 (71.2 per cent) were male and 128 (28.8 per cent) were female.

There were over twice as many male GP practitioners aged 55 or over than female GP Practitioners (refer to Table A2). Hywel Dda University Health Board had the highest proportion of GP practitioners aged over 55, accounting for 28.4 per cent of its workforce (refer to Table A2).
The Local Health Board with the highest proportion of GPs aged 55 or over is Hywel Dda University with Abertawe Bro Morgannwg University having the lowest proportion.
Chart 9 and Chart 10 below show the number of GP Providers and Salaried/Other GPs, by gender and age.

**Chart 9: GP Providers by gender and age, at 30 September 2016**

![Chart showing GP Providers by gender and age](chart9)

**Source:** GMS Census

A **GP Provider** is a practitioner who has entered into a contract with a LHB to provide services to patients.

There were 1,606 GP providers (GPs who contracted with Health Boards) in Wales. Of these 861 (53.6 per cent) were male and 745 (46.4 per cent) were female.

402 (25.0 per cent) were aged 55 or over and 627 (39 per cent) were aged under 45. There were over twice as many male GP providers aged 55 or over than female GP providers in Wales (refer to Table A3).

**Chart 10: Salaried/Other GPs by gender and age, at 30 September 2016**

![Chart showing Salaried/Other GPs by gender and age](chart10)

**Source:** GMS Census

A **Salaried/other GP** works within a partnership; these practitioners are generally remunerated by salary.
There were 403 Salaried/Other GPs working in Wales in 2016. There were more than three times as many female Salaried/Other GPs' than males in Wales (Refer to Table A1).

**GP workforce by local health board**

**Chart 11: GP practitioners per 10,000 population by Local Health Board**

At 30 September 2016, Powys had the greatest number of GP practitioners per 10,000 population at 7.8; Cwm Taf University had the lowest at 5.9. The average for Wales was 6.5 GP practitioners per 10,000 population.

Further information can be found on Statswales.
GP Retainers

A **GP Retainer** is a practitioner who provides service sessions up to a maximum of 4 per week in general practice. See [Notes](#) section for a detailed explanation.

**Chart 12: GP retainers per 100 GPs**

The number of GP retainers has decreased by 42 (68.9 per cent) over the last decade and decreased by 6 (24.0 per cent) over the last 12 months to 19. In the last decade, females have accounted for over 90 per cent of GP Retainers each year. In 2016, females accounted for all GP retainers.

The number of GP retainers per 100 GPs increased between 2006 and 2007. Since 2007 the number of GP retainers per 100 GPs decreased until 2015 which saw a slight increase in figures. In 2016 there are 0.9 GP retainers per 100 GPs compared to 1.3 GP retainers per 100 GPs in 2015.

**Chart 13: GP retainers by age, at 30 September**

Source: GMS Census
In 2016, over 9 out of 10 (94.7 per cent) of GP retainers were in the 30-44 age group. The number of GP retainers in this age group has fallen sharply in the last decade, from 46 in 2006 to 18 in 2016, a decrease of 28 (60.9 per cent).
GP registrars

A GP registrar is a practitioner employed for the purpose of training in general practice and in respect of whom a training grant is paid. See Notes section for further information.

Chart 14: GP registrars per 100 GPs, at 30 September

Since 2006 the number of GP registrars has increased by 80 (52.6 per cent) to 232 in 2016.

In comparison to 2006 the number of GP registrars per 100 GPs has increased from 8.1 to 11.5.

Chart 15: GP registrars by gender, at 30 September

In 2016 the number of male GP registrars has increased by 2 (3.0 per cent) and the number of female registrars has decreased by 1 (0.6 per cent) over the last 12 months.

In every year over the last decade there have always been more females than males. The gap between the number of male and female registrars continued to widen between 2010 and 2015. However since 2015 the gap between male and female registrars has reduced slightly; 70 per cent of registrars were female and 30 per cent were male.
GP locums

A GP Locum is a GP who deputises temporarily at a GP Practice, usually to cover for an absent GP Practitioner. Such cover should last for no more than 6 months.

This is the third year a count of GP locums has been included in this statistical release.

The data is sourced from the Medical Performers List, which lists all GPs able to practice in Wales and is maintained by the NHS Wales Shared Services Partnership. The data relates to September 2016. GP Locum data is separate from the GP Practitioners data presented earlier in the release.

There were 684 GP Locums in Wales at 30 September 2016. The largest numbers of GP locums were included for Betsi Cadwaladr University (150), this was an increase of 22 per cent compared to the number of locums at 30 September 2015. At 30 September 2016, Powys had the smallest number (41) of GP locums.

The number of GP Locums per 100 GPs varied across Local health boards from 29.5 in Aneurin Bevan to 39.4 in Powys.
Practice staff by health board

To deliver primary care, practitioners work closely with their practice staff including nurses, midwives, health visitors, managers, administrators and others involved in direct patient care (e.g. physiotherapists, chiropodists); this release details only those staff employed by the practice.

The LHBs returned data for 430 individual practices (97.5% of all Welsh practices). For practices where no data was supplied an estimate of their figures has been made (Details of the estimation methodology can be found in the Key Quality information section).

Chart 17: Practice staff by health board, at 30 September 2016

The number of recorded practice staff in Wales was 7,341 at 30 September 2016, 38 fewer (0.5 per cent) than the previous year.

(a) Include: Advanced Nurse Practitioner, Nurse Practitioner, Prescribing Nurse, Nurse Clinician, Nurse Manager, Practice Development Nurse, Physician Associate, Assistant Practitioner. These nurses have high levels of clinical skill, competence and autonomous decision-making.
(b) Extended Role Nurses and practice nurses who have received additional training in a specialist area such as Diabetes, Asthma, Learning Disability, Mental Health and Sexual Health. Only include Community Nurses or Midwives, Health Visitors, School Nurses if they are directly employed by the practice.
(c) Include all other qualified nurses employed by the practice. Do not include Health Care Assistants here (they are in the Direct Patient Care category).
(d) The total number of Nurses will not necessarily equal the sum of Advanced, Extended and Practice Nurses as some practices only provided the total number of nurses and not the breakdown.
(e) Anyone who is directly involved in delivering patient care but who is not a nurse or GP. This includes Health Care Assistants (HCAs), Physiotherapists, Pharmacist, Phlebotomist, Chiropodists, Dispensers, Counsellors, Complementary Therapists.
(f) Anyone who is involved in the administration or organisation of the GP Practice. This includes Practice Managers, Receptionists, Secretaries, IT/Computing Specialists, Link worker, Interpreter, General Office Staff etc.
(g) Any paid/employed member of practice staff who is not included in any other staff group. For example Gardeners, Cleaners etc.

Source: NHS Digital
Dispensing partnerships

As well as prescribing some Practitioners are also authorised to dispense prescriptions under the National Health Service (Pharmaceutical Services) Regulations 1992; a Local Health Board may authorise a GP to dispense to patients living in a 'controlled locality' like a rural area who would have difficulty reaching a chemist or pharmacy. Dispensing doctors are never found in areas defined as being non-rural (i.e. 'urban') where the proximity of pharmacies is guaranteed. The number of dispensing partnerships in Wales was 80 in 2016.
Workforce flows

Workforce flows are estimated by comparing successive General Medical Services (GMS) censuses. A joiner is a GP reported as working in Wales in the census in one year but not the previous year. A leaver is a GP reported as working in Wales in the census in one year but not the next year.

These figures are snapshots from two specific points in time and only represent the national position at these times. They do not cover movement in and out of the GMS between these two points, nor do they relate to the local level turnover of staff between LHBs.

The workforce flow figures cover all GP types whereas the headcount of practitioners only includes certain types. Therefore the net effect of joiners and leavers will not necessarily align with the headcount of practitioners.

GP joiners in Wales

Chart 18: Average age of joiners to GP workforce by gender

Between 2015 and 2016, 175 Practitioners (8.7 per cent of the 2016 workforce) joined the profession in Wales; 116 of joiners were female and 59 were male.

The average age of GPs joining was higher for males (41.1 to 46.3 years), and for females (36.5 to 39.0 years), compared to 12 months previously.

As in previous years there are more female joiners than male joiners (refer to Table A4).
Between 2015 and 2016, 163 Practitioners (8.2 per cent of the 2015 workforce) left the profession: 95 of leavers were male and 68 were female.

The average age of GPs leaving was slightly lower for males from 54.9 to 54.8 years, compared to 12 months previously. The average age of Female GPs leaving was the same at 47.1 years compared to the previous year.

As in previous years there are more male leavers than female leavers.

The group with the largest proportion of leavers is the 60-64 age group, with 25.7 per cent leaving the profession, closely followed by the 65+ age group (18.8 per cent).

The group with the smallest proportion of leavers is the 30-34 age group, accounting for 3.9 per cent of practitioners leaving.
Welsh language

Data on the Welsh language ability of GPs represents the number of GPs on the Medical Performers’ List who listed Welsh as a language they were able to speak. This includes all levels of fluency, from basic to fluent.

This data does not represent the number of GPs who currently consult in Welsh. Data does not include all GPs in Wales as, at the time of publishing the response rate of GPs could not be determined, but it is not thought to be less than 95 per cent.

Chart 21: Number of GPs who have any ability to speak Welsh per 10,000 population

In 2016, 369 practitioners recorded that they could speak Welsh.

Hywel Dda had the largest number of GP with an ability to speak Welsh per 10,000 population at 2.0 whilst Aneurin Bevan had the smallest with 0.6 GPs per 10,000 population in 2016.

In 2016, the Wales average was 1.2 per 10,000 population, the same as in 2015. Table A5 summarises Welsh language ability for Local Health Boards.
Chart 22: Number of GPs who have any ability to speak Welsh per 10,000 Welsh-speaking population

![Chart showing the number of GPs who have any ability to speak Welsh per 10,000 Welsh-speaking population.]

Source: NHS Wales Shared Services Partnership; ONS

In 2016, Abertawe Bro Morgannwg University has the highest number of GPs able to speak Welsh per 10,000 Welsh-speaking population at 9.1 whilst Aneurin Bevan has the smallest with 5.8.

The Wales average was 6.6 GPs per 10,000 Welsh-speaking population.

(a) The European Economic Area (EEA) (excluding the UK) includes Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Irish Republic, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and Switzerland.

Table 3 shows the country of primary medical qualification for GP practitioners. 83.3 per cent have a primary medical qualification from the UK, 4.2 per cent from the European Economic Area (EEA) (excluding the UK) and the rest (12.5 per cent) a qualification from elsewhere.
The European Economic Area (EEA) (excluding the UK) includes Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Irish Republic, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and Switzerland.
UK comparisons of GP workforce statistics

This section contains the most recent data for the four countries.

Chart 24: GP practitioners per 10,000 population

Scotland continues to have the highest number of GPs per 10,000 population at 8.0 but note the differences in definitions. It should be noted that data prior to 2010 for England is not fully comparable with previous years. See footnote on Table A6.

Chart 25: Percentage of practitioner workforce aged 55 or over, by UK country, 2016

Scotland has the lowest percentage of its GP workforce aged 55 or over at 19.5 per cent.

Northern Ireland has the highest percentage at 23.2 per cent.
Northern Ireland has the lowest percentage of female GPs at 51.3 per cent while Scotland has the highest at 56.2 per cent.
Notes
All data relates to numbers as at 30 September except for 2009 which is at 1 October.

General medical practitioner definitions
A General Medical Practitioner is a medical practitioner who treats all illnesses and provides preventative care and health education for patients of all ages.

A General Practice is an organisation which offers Primary Care medical services by a qualified General Medical Practitioner who is able to prescribe medicine where patients can be registered and held on a list. For the purpose of this release the term General Practice excludes Prisons, Army Bases, Education Establishments, Specialist Care Centres and Walk in Centres.

A GP practitioner includes GP providers and Other GPs only (excludes GP Registrars and GP Retainers).

A GP Provider is a practitioner who has entered into a contract with a LHB to provide services to patients.

Salaried/other GPs work within partnerships and were formerly known as GMS Others. These practitioners are generally remunerated by salary. This also includes GP returners. Retuner is an old name for those GPs on what is now the induction and refresher training.

A GP register is a practitioner employed for the purpose of training in general practice and in respect of whom a training grant is paid. A GP Registrar in this release is either in their 2nd or 3rd year so the GP registrars are not all in the same cohort.

A GP Retainer is a practitioner who provides service sessions in general practice. They undertake the sessions as an assistant employed by the practice and are allowed to work a maximum of 4 sessions each week.

A GP Locum is a GP who deputises temporarily at a GP Practice, usually to cover for an absent GP Practitioner. Such cover should last for no more than 6 months.

Registered patients per practitioner - the number of registered patients divided by the number of 'all practitioners'.

Where tables refer to numbers, the figures represent a headcount of GPs. Some GPs may work in several partnerships/practices. Where this occurs the GP is only counted for the partnership/practice where the GP has the most senior position and/or spends most of their time as this will be their main place of work.

A Partnership is a financial arrangement between two or more bodies of which one must be a practitioner.

The primary medical qualification used to identify the country of qualification is based on information held on each individual doctor on the GMC register. The countries are grouped into UK, European Economic Area (EEA) and Elsewhere. Historical figures are based on the current EEA membership for comparability.

General Medical Services (GMS) is the contract which most GPs are employed.
Joiners and Leavers

A leaver is a GP who was working (as a GP practitioner) at a Welsh practice in one census but was not a GP practitioner at a Welsh practice the following year.

A joiner is a GP who was working (as a GP practitioner) at a Welsh practice in one Census but was not a GP practitioner at a Welsh practice the previous year. i.e. If a GP was working as a registrar at the 2012 census and then took up a position as a GP practitioner they will be counted as a joiner.

General practice staff definitions

Advanced Level Nurses: Include advanced nurse practitioner, nurse practitioner, prescribing nurse, nurse clinician, nurse manager, practice development nurse, physician associate, assistant practitioner. These nurses have high levels of clinical skill, competence and autonomous decision-making.

Extended Role Nurses: Extended role nurses and practice nurses who have received additional training in a specialist area such as Diabetes, Asthma, Learning Disability, Mental Health and Sexual Health. Only include Community Nurses or Midwives, Health Visitors, School Nurses if they are directly employed by the Practice.

Practice Nurses: Include all other qualified nurses employed by the practice. Do not include Health Care Assistants here (they are in the Direct Patient Care category.)

Direct Patient Care: Anyone who is directly involved in delivering patient care but who is not a nurse or GP. This includes Health Care Assistants (HCAs), Physiotherapists, Pharmacist, Phlebotomist, Chiropodists, Dispensers, Counsellors, Complementary Therapists etc.

Administrative/Clerical: Anyone who is involved in the administration or organisation of the GP Practice. This includes Practice Managers, Receptionists, Secretaries, IT/Computing Specialists, Link worker, Interpreter, General Office Staff etc.

Other: Include any paid/employed member of practice staff who is not included in any other staff group. For example Gardeners, Cleaners etc.
Key Quality Information

Data sources

General medical practitioners

1. NHS Digital in England collect data for England and Wales using the Exeter database. This database is a computerised payment system of General Medical Practitioners (GMPs) who are in contract with Local Health Boards. Selected information is supplied by NHS Digital via secure electronic data transfer. This represents the majority of data used in this release.

Additional sources used are:

- Information Services Division Scotland, Business Services Organisation (Northern Ireland) and NHS Digital (England): The other UK countries provide data for the number of GPs (headcounts), the percentage of GPs aged 55 or over, the percentage of GPs who are female and GPs per 10,000 population.

- Mid Year Estimates of the Population: Office for National Statistics’ Mid year estimates for 2015 are used to calculate the number of GPs per 10,000 population and the number of GPs who have any ability to speak Welsh per 10,000 population. Mid year estimates of population can be found on our StatsWales website (Click on the link to the Mid year estimates on StatsWales).

- 2011 Census: Welsh speaking population used to calculate the statistic “number of GPs who have any ability to speak Welsh per 10,000 Welsh-speaking population” is derived from the 2011 Census of Population. In previous editions data from the 2001 Census was used.

- Welsh speaking GPs: This data is derived from NHS Wales Shared Services Partnership – Contractor Services and used to calculate the number of GPs who have any ability to speak Welsh per 10,000 population and the number of GPs who have any ability to speak Welsh per 10,000 Welsh-speaking population. The counts are derived from the Medical Performers’ List which lists all GPs able to practice in Wales.

General practice staff

- NHS Digital compile the data from the ANC4 forms returned to the NHS Digital by the seven Welsh Local Health Boards (LHBs). Information is collected from General Practices as at the 30 September 2016.
Coverage

1. A full census of GPs was carried out as at 30 September 2016. Only practitioners whose 'Responsible Local Health Board' is within Wales have been included. The 'Responsible Local Health Board' is, in general, the Local Health Board area in which the majority of patients of the practice to which the practitioner belongs reside.

2. Information collected included details of each practitioner's name, age, sex, partnership details, country of primary medical qualification and whether certain allowances are payable (e.g. seniority). Also collected are details of partnership structure, patients, registrars, retainers and services offered by partnerships. Locum doctors are excluded.

3. This release covers the period 2006 to 2016. All data relates to headcount numbers as at 30 September except for 2009 which is at 1 October.

4. There were 38 GP practitioners working in more than one practice at the 30 September 2016.

5. Data on the Welsh language ability of GPs represents the number of GPs on the Medical Performers' List who listed Welsh as a language they were able to speak. This includes all levels of fluency, from basic to fluent. This data does not represent the number of GPs who currently consult in Welsh. Data does not include all GPs in Wales as, at the time of publishing the response rate of GPs could not be determined, but it is not thought to be less than 95 per cent.

6. Prior to 2010 General Practice staff information was collected at an aggregated Local Health Board level with the completeness of such returns at practice level being unknown. In 2010 the method of collecting the information changed to individual practice level submission. Data prior to 2010 may not be directly comparable. In 2012, improvements were made to the data collection form and Data Quality process. 99 per cent of practices provided a return in 2013 and 2014. 97 per cent in 2015 and 98 per cent in 2016. Figures for the remaining practices were estimated to give a full census figure.

Accuracy

Statisticians within the Welsh Government review the data and query any anomalies with the NHS Wales Shared Services Partnership and NHS Digital before tables are published. The figures in this release reflect the final position as at the 30 September 2016.

Timeliness and punctuality

This release has met the previously announced date of publication.

Comparability and coherence

7. In previous editions of this release, GP Whole Time Equivalent figures (WTE) were included. These have been omitted from the past 3 years following concerns expressed by users about data quality. WTE figures will be published once the issue has been fully investigated and resolved. Headcount figures are unaffected.
Revisions

8. Routine revisions of previous year’s rates to use the correct mid year estimate (MYE) year will be made each year. i.e. Last years rates have been updated to use the MYE for 2015. All statistics in this release can be regarded as final figures, not subject to further revision or update.

Accessing and clarity

9. The data behind the chart and tables in this release can be found on StatsWales (a free-to-use internet service that allows visitors to view, manipulate, create and download tables). Please select “Health and Care” at the navigation screen of the following site: StatsWales.

Relevance

What are the potential uses of these statistics?

10. These statistics will be used in a variety of ways. Some examples of these are:
   - advice to Ministers;
   - to inform debate in the National Assembly for Wales and beyond;
   - to make publically available data on GP services in Wales.

Who are the key potential users of this data?

11. These statistics will be useful both within and outside the Welsh Government. Some of the key potential users are:
   - Ministers and the Members Research Service in the National Assembly for Wales;
   - Local Health Boards;
   - Local Authorities;
   - Primary care clusters;
   - GP Practices;
   - The Department for Health and Social Services in the Welsh Government;
   - Other areas of the Welsh Government;
   - National Health Service (eg Workforce, Education & Development Services (WEDS)) AND Public Health Wales
   - The research community;
   - Students, academics and universities;
   - Individual citizens and private companies.
The statistics may also be useful for other UK governments
- The Northern Ireland Executive’s Department of Health, Social Services and Public Safety
- The Scottish Government
- The Department of Health in England.

UK comparisons
The other UK countries also publish counts of GPs. Users should be aware of slight differences in definitions and methodologies; these are referred to in the footnotes to Table 6.

England
NHS Digital: NHS Staff 2005 - 2015 (General Practice):
  - General and Personal Medical Services, England 2005 - 2015, as at 30 September, experimental statistics

Scotland

Defence personnel NHS commissioning quarterly statistics: financial year 2016/17
Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural well-being of Wales. The Act puts in place seven well-being goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators ("national indicators") that must be applied for the purpose of measuring progress towards the achievement of the Well-being goals, and (b) lay a copy of the national indicators before the National Assembly. The 46 national indicators were laid in March 2016.

Information on indicators and associated technical information - How do you measure a nation’s progress? - National Indicators

The statistics included in this release could also provide supporting narrative to the national indicators and be used by public services boards in relation to their local well-being assessments and local well-being plans.

**Source:** GMS Census; General Medical Performer list

(a) At 30 September except for 2009 which is at 1 October.

(b) Whole Time Equivalent (WTE) figures have been omitted this year following concerns expressed by users about data quality. WTE figures will be published once the issue has been fully investigated and resolved. Headcount figures are unaffected.

(c) Include 2 GPs whose gender was unknown in 2010.

(d) Include GP Registrars whose age was unknown: one in 2011, three in 2014 and 19 in 2015

(e) Include GPs whose age was unknown: one in 2012, three in 2014 and 25 in 2015.

(f) The data is sourced from the medical performers list, which is provided by the NHS Wales Shared Services Partnership. The data for 2014 is correct as at February 2015. GP Locum data is separate from the GP Practitioners data presented in the release. In 2014 due to the time period when the data was obtained, there may be a small number of GPs who have been double counted as being a GP Practitioner and a GP Locum. Data after 2014 is at 30 September.

Source: GMS Census

(a) Workforce flows are estimated by comparing successive GMS censuses for all GP types. Therefore this table will not align with the headcount of practitioners. Joiners are those Practitioners reported in the census one year, but not reported as a Practitioner in the previous year. These figures are therefore snapshots from two specific points in time and only represent the national position at these times.

(b) The years in this table denote a full year between each census. The census dates are 30 September except for 2009 which is at 1 October.

(c) Average age of those whose age is 'known'.

(a) The GPs noted here are from the Medical Performers List. This is a list of all GPs able to practice in Wales, and includes principals, locums, salaried doctors, registrars and retainers.
(b) Number of Welsh Speaking GPs on the All Wales Medical Performers List as at 30 September 2016.
(c) Office for National Statistics, mid year population estimates, 2015.
(d) 2011 Census.
(e) Due to low numbers in some local authorities only Local Health Boards are shown.

Source: GMS Census; NHS Digital; ISD Scotland; HSC N.Ireland

(a) At 30 September except 2009 which is at 1 October.
(b) New headcount methodology for 2010 onwards is not fully comparable with previous years data due to improvements that make it a more stringent count of absolute numbers. Previous years represent a count of contracts held by GPs.
(c) GPs excluding registrars and retainers.
(d) As at 1 October for 2006 to 2014 otherwise as at 30 September: comprising Performer and Performer Salaried contracted GPs. Headcounts may differ slightly from the most recent Scotland publication as data is sourced from a live database.
(e) Data only includes what would have been Unrestricted Principals or Equivalents (UPEs) and Restricted GPs under the old contract.
(f) Rate per 10,000 population updated to reflect the most up to date population estimates.
(g) GPs per 10,000 population not available for 2014. Northern Ireland population estimates are not available for 2014 until June 2015. For information, in 2014 Northern Ireland had 6.3 GPs per 10,000 registered patients, however this figure is not comparable with other figures provided.
(h) Prior to 2015 figures are sourced from NHAIS GP Payments (Exeter) System. From 2015 figures are sourced from the workforce Minimum Dataset (w MDS) and include estimates for missing data. Figures from 2015 onwards are not comparable with previous years.
Appendix 2 - StatsWales tables

General practitioners workforce headcounts and Whole Time Equivalents by local health board, gender and year.

General practitioners, registrars, retainers and average list size by local health board and year.

General practitioners workforce trend by age and gender.

General practitioners workforce flows by gender and year.

Local health board comparisons of GP workforce by year.

UK comparisons of general practitioners workforce by year.

General practitioners Welsh language ability by local health board and year.
